

Congratulate Javier Aguirre – our newest Certified Thermographer

(Independence, KS - May 2017)

Javier is our FAA licensed UAS pilot and Certified Composite Inspector (wind turbine blades). Adding to his impressive resume – he is now he is a Certified Infrared Thermographer. But just because he is certified, doesn't mean that the training stops. In fact, it is just beginning. We have an upgrade training program which includes arc-flash safety, identification of thermal anomalies, logging of supervised training hours and even a practical exam before Javier can work without a trainer/certifier looking over his shoulder. We are definitely keeping him busy - in the past week, Javier has surveyed 4 low-slope roofs using our infrared equipped UAV, a day performing electrical infrared at a manufacturing facility and a day at inspecting high-voltage components at a wind farm – all while under my watchful eye 😊
